

## Examples of justifications to be included in the application (indicated in Section 8 of the application)

### Example 1 (BPF-3 products)

#### Biocidal product family with no sub-families:

- These products form a family of three *disinfectants for use in medical facilities, schools, old people's homes and other industrial activities, as well as products for disinfecting installations, containers, utensils, cutlery and crockery, surfaces and pipes used in the manufacture, transport, storage or consumption of foodstuffs, animal foodstuffs, or drinks (including drinking water) destined for humans or animals.* They constitute a family of biocide products on the basis of the following common properties or requirements:
  - ✓ They all contain the same active substance (CAS xxxx-xx-x) in limited concentrations ranging from 17% to 26%
  - ✓ They contain the same constituents in a range of limited concentrations
  - ✓ They share the same fields of application, methods of use and categories of user
  - ✓ They bear the same hazard and precautionary statements
  - ✓ They are characterised by a similar level of efficacy and risk

### Example 2 (BPF-5 sub-families (correct))

#### Family of 7 biocide products comprising 5 sub-families:

- These constitute a biocidal product family on the basis of the following common properties and requirements:
  - ✓ They all contain the same active substance (**CAS xxxx-xx-x**) in limited concentrations ranging from 17% to 100%
  - ✓ They contain the same constituents in a range of limited concentrations
  - ✓ The products in each sub-family have the same fields of application, methods of use and categories of user
  - ✓ The products in each sub-family bear the same hazard statement and safety advice
  - ✓ The products in each sub-family are characterised by a similar level of efficacy and risk

These products form a family comprising 5 sub-families:

1. Sub-family 1-1 comprises *disinfectants for use in medical facilities, schools, old people's homes and other industrial activities, as well as products for disinfecting installations, containers, utensils, cutlery and crockery, surfaces and pipes used in the manufacture, transport, storage or consumption of foodstuffs, animal foodstuffs or drinks (including drinking water) destined for humans or animals*, in the form of **ready-to-use liquids** designed for private and professional use.
2. Sub-family 1-2 comprises *disinfectants for use in medical facilities, schools, old people's homes and other industrial activities, as well as products for disinfecting installations, containers, utensils, cutlery and crockery, surfaces and pipes used in the manufacture, transport, storage or consumption of foodstuffs, animal foodstuffs, or drinks (including drinking water) destined for humans or animals*, in the form of **ready-to-use liquids** designed for professional use.
3. Sub-family 1-3 comprises one *disinfectant for use in medical facilities, schools, old people's homes and other industrial activities*. This product is also a *disinfectant for installations, containers, utensils, cutlery and crockery, surfaces and pipes used in the manufacture, transport, storage or*

*consumption of foodstuffs, animal foodstuffs, or drinks (including drinking water) destined for humans or animals, in the form of **wipes** designed for private and professional users.*

4. Sub-family 1-4 comprises one *preservative for products during storage*, in the form of **granules**, designed for professional use.
5. Sub-family 1-5 comprises one *preservative for products during storage*. This product is also a *working or cutting fluid preservative*, in the form of **ready-to-use liquid**, designed for professional use.
