

What chemicals (sold to the private user) must be fitted with child-resistant fastenings and/or with a tactile warning of danger?

For chemicals with a classification, labeling and packaging in accordance with the [CLP-Regulation](#) (Art. 35 para. 2).

Sold to the general public and classified as:	Child-resistant Fastenings	Tactile Warnings ³
	Substances and mixtures	Substances and mixtures
Acute toxicity category 1 to 3	yes	yes
Acute toxicity category 4		yes
Specific target organ toxicity — single exposure category 1	yes	yes
Specific target organ toxicity — single exposure category 2		yes
Specific target organ toxicity — repeated exposure category 1	yes	yes
Specific target organ toxicity — repeated exposure category 2		yes
Skin corrosion category 1A, 1B and 1C	yes	yes
Respiratory sensitisation category 1		yes
Aspiration hazard category 1	yes ⁴	yes
Germ cell mutagenicity category 2		yes
Carcinogenicity category 2		yes
Reproductive toxicity category 2		yes
Flammable gases category 1 and 2		yes
Flammable liquids category 1 and 2		yes
Flammable solids category 1 and 2		yes
Contains at least 3% methanol ⁵ (CAS-Nr. 67-56-1)	yes	
Contains at least 1% Dichloromethane (CAS-Nr. 75-09-2)	yes	

Technical standards: for reclosable packages: EN ISO standard 8317, for non-reclosable packages: standard EN 862 and for tactile warning of danger: EN ISO standard 11683.

³ This does not apply to aerosols only classified and labelled as extremely flammable or flammable.

⁴ This does not apply to aerosols or containers with a sealed spray attachment.

⁵ Noted that above a certain concentration, methanol mixtures also need a tactile warning because the mixture would then have to be classified as flammable liquid, category 2.
