

**What chemicals (sold to the private user) must be fitted with child-resistant fastenings and/or with a tactile warning of danger?**

For chemicals with a classification, labeling and packaging in accordance with the [CLP-Regulation](#) (Art. 35 para. 2).

Sold to the general public and classified as:	Child-resistant Fastenings	Tactile Warnings <sup>1</sup>
	Substances and mixtures	Substances and mixtures
Acute toxicity category 1 to 3	yes	yes
Acute toxicity category 4		yes
Specific target organ toxicity — single exposure category 1	yes	yes
Specific target organ toxicity — single exposure category 2		yes
Specific target organ toxicity — repeated exposure category 1	yes	yes
Specific target organ toxicity — repeated exposure category 2		yes
Skin corrosion category 1A, 1B and 1C	yes	yes
Respiratory sensitisation category 1		yes
Aspiration hazard category 1	yes <sup>2</sup>	yes
Germ cell mutagenicity category 2		yes
Carcinogenicity category 2		yes
Reproductive toxicity category 2		yes
Flammable gases category 1 and 2		yes
Flammable liquids category 1 and 2		yes
Flammable solids category 1 and 2		yes
Contains at least 3% methanol (CAS-Nr. 67-56-1)	yes	yes <sup>3</sup>
Contains at least 1% Dichloromethane (CAS-Nr. 75-09-2)	yes	yes <sup>3</sup>

Technical standards: for reclosable packages: EN ISO standard 8317, for non-reclosable packages: standard EN 862 and for tactile warning of danger: EN ISO standard 11683.

<sup>1</sup> This does not apply to aerosols only classified and labelled as extremely flammable or flammable.

<sup>2</sup> This does not apply to aerosols or containers with a sealed spray attachment.

<sup>3</sup> Note that above a concentration of 3%, methanol mixtures also require a tactile warning because the mixture must be classified as STOT SE 1. The same applies to dichloromethane mixtures above 1%, because the mixture must be classified as Carc.2.
