

Information sheet on the authorisation requirement for ozone generators

Purpose

This fact sheet is intended for those who intend to bring an ozone generator intended for biocidal use to the Swiss market for commercial or professional purposes.

It is intended to provide comprehensive information and explain the legal and technical requirements for the authorisation and distribution of such devices in accordance with the applicable regulations. The fact sheet is designed to serve as a guide to ensure that your project complies with the applicable regulations and that a smooth placing on the market is guaranteed.

Please read the fact sheet carefully to familiarise yourself with the necessary steps and obligations before offering an ozone generating device for sale in Switzerland.

Note: Given that the fact sheet leaflet covers legal and technical aspects, we recommend that you seek professional advice to ensure that all specific requirements are met and that your project complies with the applicable regulations.

Definitions

The definition of the active substance **Ozone generated from oxygen** includes the following production methods:

1. Electrolysis of water
2. Electrical discharge in (ambient) air or oxygen
3. UV irradiation of air

Ozone generated from oxygen falls into category 4 of *in situ* systems. This means that the precursor (oxygen, ambient air or water) is not marketed for biocidal purposes or as a precursor, but either occurs naturally (ambient air or water), is commercially available (oxygen from pressurised gas cylinders, so-called commodity chemicals) or is obtained from ambient air (PSA, VSA, VPSA).¹

In this case, it is not the precursor that is subject to authorisation, but the *in situ* system or the active substance technically produced *in situ*.

¹ Pressure swing adsorption, vacuum swing adsorption, vacuum pressure swing adsorption

Obligations

A device that generates ozone from oxygen (air or water) for biocidal purposes must be covered by an authorisation before it can be placed on the market commercially or used professionally in Switzerland.

The active substance **Ozone generated from oxygen** will be included in the list in Annex 2 of the OBP for product types 2, 4, 5 and 11 as of 1 July 2024. As a result, applications for [transitional authorisation AN](#) can only be submitted until 30 June 2024.

IMPORTANT:

However, it should be noted that transitional authorisations AN are limited in time. An authorisation AN granted before 1 July 2024 is also only valid until 31 December 2024, unless an application for authorisation under the European harmonised procedure has been submitted for an transitional authorisation by 1 July 2024 at the latest and the notification authority has been notified of this (Art. 22 para. 2 let. a and b OBP).

From 1 July 2024, only authorisations in accordance with the [EU harmonised procedure](#) are possible.

Frame authorisation of multiple manufacturers

As of October 2023, fewer than ten approvals for *in situ* systems that emit ozone have been granted in Switzerland under the transitional approval AN procedure. Four of these authorisations cover a large number of device manufacturers from Switzerland and abroad.

If you intend to place a device for generating ozone from oxygen on the market commercially or use it professionally, you can use the following list to check whether the device could be covered, depending on the manufacturing method, the maximum active substance concentration and the product type. If this is the case, it is essential to contact the authorisation holder listed in each case to find out the specific regulatory and technical conditions, such as the requirements for the *in situ* infrastructure.

Device manufacturers

Manufacturing principle	Silent electrical discharge in oxygen
Ozone concentration % w/w (max.)	21.0
Product types	2, 4, 5, 11
Authorisation holder	Rheno AG, Giessenstrasse 15, 8953 Dietikon, Switzerland
Authorisation number	CHZN5144
CPID	578423-62
